FLY FAST! BE COOL!

Your Mooney is the fastest airplane in its class. By adding the **Mooney M20R Air Conditioning System** to your Bravo, Ovation or Acclaim, it can now be the coolest, too.

Mooney Air Conditioning is a vapor cycle cooling system engineered by the premier manufacturer of vapor cycle cooling systems to private and business aviation and the military. The highly reliable dual evaporators provide 14,000 BTU per hour of cooling that can be used in all phases of flight.

Air is distributed through a large vent in the baggage compartment and overhead wemac valves. It weighs 66 lbs. and takes two weeks to install.

For pricing and more information about installing the Mooney M20R Air Conditioning System, please call:
